

# Rules of the game for GoNature

## Number of players

2-9 persons or 2-9 groups

## Age of players

9 - 99+

The game board is designed for nine players or groups. It features nine rows, each containing nine playing fields. Each playing field is marked with a symbol corresponding to one of the nine thematic areas of the game.

## 9 Starting Cards - one for each chapter

At the beginning of the game, nine starting cards are placed face down on the table. Each starting card depicts the symbol of one of the nine thematic areas of the game. Players or groups select a card, revealing the theme they will start with. For example, if a player or group draws the starting card for the "Natural Resources" thematic area, they must answer a question related to this theme.

### Explanation of the Game Cards:

Each thematic area is represented by a distinct color; for instance, the "Natural Resources" thematic area is depicted in green. Additionally, each thematic area is subdivided into three categories of tasks:

**Question Cards:** Designed for answering specific questions.

**Activity Cards:** Meant for completing tasks, including internet research or discussing statements in the context of critical thinking.

**True or False Cards:** Present statements and players or groups must decide whether these statements are true or false.

#### Question-Cards for each chapter

#### Activity-Cards for each chapter

#### True or False-Cards for each chapter

**Additionally, there are special cards that players can use:**

**Each player or group receives ONE Joker card, ONE Take Another Card, and ONE Take a Break card per game.**

The **JOKER** card can be used if a question is answered incorrectly to advance to the next square.

The **TAKE A BREAK** card can be played to prevent another player/group from winning. When it's a player's/group's turn, others can give them this card, and the player/group must take a break for one round. This card can be played at any time. However, no more than two TAKE A BREAK Cards may be used per player or group.

The **TAKE ANOTHER CARD** can be used when a player or group arrives at a square and believes they cannot answer the question related to that thematic area. However, this card must be discarded without seeing the question that would have come up. This way, the player or group moves on to the next round.

### **JOKER Cards**

### **TAKE A BREAK Cards**

### **Take another card**

### **Cards**

#### **Preparation of the game:**

Kindly print both the game board and the game cards. Organize the cards into thematic stacks, with each stack comprising a blend of question cards, activity cards, and true or false cards.

#### **Starting the Game:**

At the beginning of the game, each player or group draws a starting card. There are a total of nine starting cards. Each starting card bears a colored symbol representing one of the nine chapters. Each chapter forms a thematic focus of the game. Subsequently, each player or group looks for their starting square on the game board and places the card there.

The player or group drawing the card with the theme "Natural Resources" starts, and the game proceeds clockwise.

If fewer than 9 players or groups participate in the game and no one draws the starting card "Natural Resources," the player or group whose symbol/theme comes next begins.

#### **Now the game can start:**

The player or group with the theme "Natural Resources" starts and places the starting card on the square with the same symbol and color in the first row. If there are fewer than 9 players or groups, the player or group that is next or closest to "Natural Resources" starts.

After all the cards have been sorted by theme - each stack containing mixed question, activity, and true or false cards - a player or group draws a card. Another player or a player from another group reads the cards and indicates whether the answer is correct or wrong.

Please remember:

*The Question Cards are designed for answering specific questions.*

*The Activity Cards are meant for completing tasks, including the option to conduct research on the internet, or for discussing statements in the context of critical thinking.*

*The True or False Cards present statements, and players or groups must decide whether these statements are true or false.*

**Each player or group receives ONE Joker card, ONE Take Another Card, and ONE Take a Break card per game.**

*The JOKER card can be used if a question is answered incorrectly to advance to the next square.*

*The TAKE A BREAK card can be played to prevent another player/group from winning. When it's a player's/group's turn, others can give them this card, and the player/group must take a break for one round. This card can be played at any time. However, no more than two TAKE A BREAK CARD may be used per player or group.*

*The TAKE ANOTHER CARD can be used when a player or group arrives at a square and believes they cannot answer the question related to that thematic area. However, this card must be discarded without seeing the question that would have come up. This way, the player or group moves on to the next round.*

If the question was answered incorrectly, the player or group must remain on this square and try their luck again in the next round or use the Joker card. Now it is the next player's or group's turn - clockwise.

**The winner is the first player or group that reaches the finish line.**

Question

Question

Question

Question

Question

Question

Question

Question

What are the top 3 natural resources?

Water  
Soil  
Air

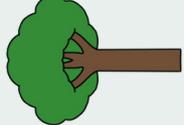

What are non-renewable resources?

Nonrenewable resources are resources that cannot be replenished or replaced once they are depleted, such as fossil fuels (coal, oil, and natural gas), minerals (gold, silver, and copper), and groundwater

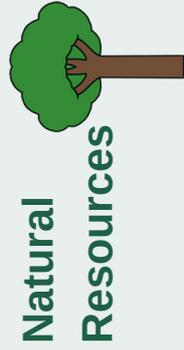

What types of resource management do you know? Name at least three!

management of forest resources, water resources, mineral resources, land resources, energy resources, wildlife/biodiversity resources, agricultural resources;

What does the term value chain mean?

The term "value chain" in the context of natural resources refers to the process of extracting, processing and valorizing raw materials. It describes the process by which natural resources move from their place of origin to the end product through various stages of processing and use.

Please describe the term "natural resources"!

Natural resources take on functions or are part of nature. These bring an economic benefit. Natural resources include raw materials, biodiversity as well as geothermal or wind and solar energy. Some natural resources are also referred to as natural assets.

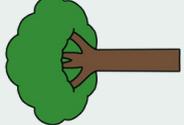

What are renewable resources?

Renewable resources are also called renewable resources. Over time these can be replenished through natural processes such as solar energy, wind energy and wood.

How does the depletion of natural resources affect the earth and us humans?

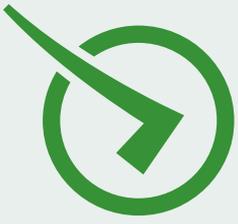

Depletion of non-renewable resources like fossil fuels increases greenhouse gas emissions and contributes to climate change. Water and mineral depletion cause water scarcity, loss of valuable minerals, and impact economic development. Depletion of renewable resources like forests leads to biodiversity loss, ecosystem damage, and reduced availability of timber. Soil depletion reduces its ability to support crops, impacting food security and economic development.

What negative impacts on the environment can the value chain have?

Every extraction and processing of a raw material has an impact on the environment: soil degradation, water scarcity, loss of biodiversity, impairment of ecosystem functions or worsening of climate change, release of greenhouse gases, emission of pollutants or impairment of ecosystems and biodiversity.

Question

Question

Question

Question

## Water Management

### Why is water important?

There is no life on earth without water. All living organisms, people, plants and animals, need water to survive.

## Water Management

### What is surface water?

Surface water is any area of water found on the earth's surface. This includes both the saltwater in the oceans and the freshwater in rivers, streams, lakes, wetlands, reservoirs, and creeks.

## Water Management

### How can groundwater emerge at the earth surface?

Groundwater is brought to the surface naturally through a spring, or can be discharged into lakes, wetlands, and streams.

## Water Management

### What are examples of lentic waters?

Examples: lakes, ponds, pools, wetlands, swamps, reservoirs.

## Water Management

### What is water management?

Water management is the management of water resources available on earth, like rivers, streams, lakes, wetlands, and oceans.

## Water Management

### What are types of fresh water resources on earth?

Fresh water resources are found in glaciers, lakes, ponds, rivers, streams, wetlands, and ground water.

## Water Management

### What is ground water?

Groundwater is the rain and snowmelt water stored underground in the cracks and spaces in soil, sand and rock. It is one of the most important resources of freshwater.

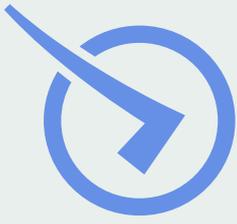

## Water Management

### What are examples of flowing freshwaters?

Examples: streams, brooks, rivers, waterfalls, springs.

## Water Management

Debate the impacts of freshwater scarcity.

- Health impacts
- Food security
- Environmental degradation
- Social and cultural impacts
- Economic impacts
- Climate change impacts

## Water Management

Discuss the human activities that make water resources polluted and contaminated.

Examples

- Sewage and Wastewater
- Industrial waste
- Agriculture -
- Marine dumping
- Marine oil leakage
- Burning of fossil fuels
- Global warming

## Water Management

Debate the ways you can conserve and protect water in the garden.

Examples

- Collect rainwater in a bucket or a rain barrel to water plants or for other non-drinking purposes. Thus you can help reduce the use of tap water for outdoor purposes.
- Use a watering can instead of a hose to water plants. This can help control the amount of water used and avoid overwatering.

## Water Management

Debate the ways you can reuse items.

- Buy second-hand clothes or wear your older siblings/friends clothes;
- Borrow books, toys, and sports equipment such as bikes, skis, snowboards, skates, and surfboards;
- Household items such as glass jars, containers can be washed and reused again.

## Water Management

Debate the value of water.

Water is the most precious resource that is essential for all livings - people, animals, and plants. Humans need water for drinking, cooking, having a shower, agriculture, industry, and other purposes.

## Water Management

Discuss the ways to conserve water at households.

Examples

- Replace a bath for a shower;
- Replace your shower head with a water efficient one;
- Pour water into a cup when cleaning your teeth, shaving or washing face;
- Use the dishwasher or washing machine when they are full;
- Fill the kettle with the amount of water you need when making tea or coffee.

## Water Management

Debate the ways you can help protect water resources.

Examples

- Participation in local clean-up activities;
- Support water conservation initiatives, see To do no. 1 and/or as avoid water waste; use 3 Rs (reduce, reuse, recycle);
- Spread awareness about the importance of water among friends and family.

## Water Management

Debate the ways you can use 3 Rs (reduce, reuse, recycle) at households to conserve water indirectly.

Reduce the consumption in general, reuse the items, and separate the garbage separation. Thus, you can conserve water used in further production and processing of goods.

## Water Management

Why is freshwater the most valuable commodity?

Please, check the QR-code.

## Water Management

Discuss the impacts of poor quality drinking water.

- Health risks: contaminated drinking water can lead to diseases, such as diarrhea, cholera, dysentery, hepatitis, and other illnesses that can even be life-threatening.
- Environmental impacts: contaminated drinking water can leach into the soil, contaminate groundwater, surface water, and other water bodies, and harm aquatic ecosystems, wildlife, and vegetation.

## Water Management

What does freshwater water scarcity mean?

Please, check the QR-code.

## Water Management

Debate the options for wastewater reuse.

Wastewater, also called grey water, is water that already has been used. At households, for example, this includes the leftover when washing vegetables, fruits and other items without using the detergents.

Question

Question

## Wildlife Gardens

### What is the principle of a wildlife garden?

The basic principle of a wildlife garden is to create a habitat that provides food, water, shelter, nesting and breeding areas for various wildlife species.

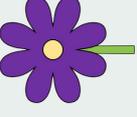

## Wildlife Gardens

### What can make a garden more wildlife-friendly?

- Use native plants;
- Create different layers of vegetation;
- Provide food sources;
- Provide water sources;
- Provide dead leaves and plant material in the garden to decompose naturally
- And others

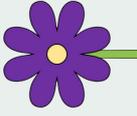

## Wildlife Gardens

### How to go peat free in the wildlife garden?

Example: make your own compost, mulch with organic materials, avoid purchasing peat-based products.

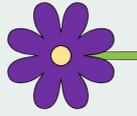

## Wildlife Gardens

### Why to attract insects in wildlife gardens?

They pollinate the plants, are a part of a food chain, support the biodiversity.

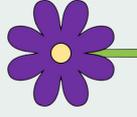

## Wildlife Gardens

### What species can a wildlife garden attract?

Example: various species of birds, insects, small mammals, amphibians, reptiles, soil invertebrates and vertebrates.

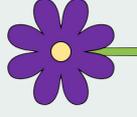

## Wildlife Gardens

### Why is it important to create a wildlife garden?

Wildlife garden supports biodiversity and enhances the overall health and resilience of the ecosystem.

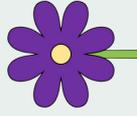

## Wildlife Gardens

### Why are pesticides, herbicides and chemical fertilizers bad for the wildlife garden?

These kill beneficial insects, birds and mammals that rely on the garden for food and shelter. These also contaminate soil and water and can also enter the food chain.

## Wildlife Gardens

### How to go chemical free in wildlife gardens?

Examples: rotate crops, use organic fertilizers such as compost, well-rotted manure and minerals, support natural pest control.

## Wildlife Gardens

**Discuss the ways to save water in the wildlife garden.**

- Use compost;
- Plant drought-resistant plants;
- Scythe the max. twice a season;
- Create different layers of vegetation;
- Use mulch and bark;
- Use a water butt to catch rain water;
- Use native plants, shrubs and trees.

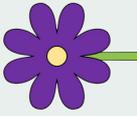

## Wildlife Gardens

**What can be composted?**

- Grass cuttings and dead leaves;
- Glossy paper;
- Organic fruit and vegetable; Scraps and peel;
- Chemically treated fruit and vegetable scraps and peel;
- Cat or dog poo; eggshells.

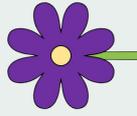

## Wildlife Gardens

**Make a poster**

Choose a species in the wildlife garden. Make a title of the poster of the species name. Observe the species, its size, shape, colour, behaviour, and the habitat it likes. Draw all. Find more information about the species in relevant sources such as encyclopaedias, the internet, or scientific publications and write some facts on the species on the poster.

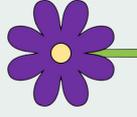

## Wildlife Gardens

Plant identification tour

Take a walk around the wildlife garden and identify the different types of plants and trees growing there. Make a list of 8 plants and 6 trees.

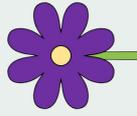

## Wildlife Gardens

Pollinator observation tour

- Walk around the wildlife garden and observe the pollinators, such as bees, bumblebees, and butterflies.
- Identify which flowers are the most attractive to them.

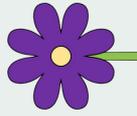

## Wildlife Gardens

**Debate how the following ways increase the biodiversity in the wildlife garden.**

- Grow wildlife-friendly plants, shrubs, trees;
- Plant pollinating flowers,
- Make a pool or bog;
- Make a birdhouse, an insect hotel;
- Create a butterfly meadow.

## Wildlife Gardens

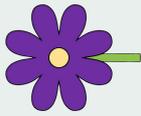

Bird Watching Tour

Set up a bird feeder and bird bath. Observe and identify the different bird species that visit the garden.

Start  
Card

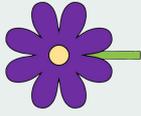

## Wildlife Gardens

Prior to creating a wildlife garden, it is critical to select a suitable location and develop a garden plan.

True

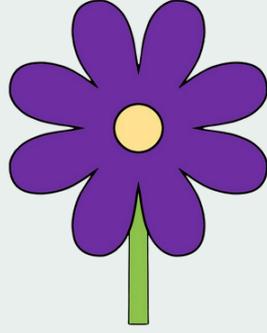

## Wildlife Gardens

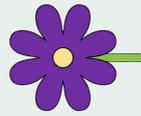

**Debate the importance of dead leaves to use in the gardens.**

- Dead leaves are full of minerals, trace elements, and nutrients such as nitrogen, phosphorus, potassium, calcium, magnesium, and sulphur, which are essential for plant growth.
- Dead leaves can be piled to make compost or can be saved for mulch in spring and summer.

## Wildlife Gardens

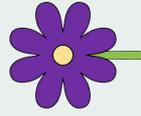

## Wildlife Gardens

Wildlife gardens help reduce the negative impact of human activities on the environment.

True

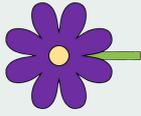

## Wildlife Gardens

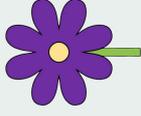

**Debate on the importance of mulch.**

- Mulch has a lot of benefits such as:
- Keeping the soil moist, cool, and stationery. |
- Provides a habitat for soil life and forms a foamy layer of humus on the topsoil.
- In the process, organic materials such as dead leaves, straw, wood chips, etc. cycle nutrients back into the soil as they decompose atop.

## Zero Waste Household

**What are some sustainable alternatives to using disposable plastic bags for grocery shopping?**

Using reusable shopping bags made of cloth or other materials, or bringing your own containers for bulk items.

## Zero Waste Household

**What are some ways to repurpose old clothing instead of throwing it away?**

Upcycling or donating old clothing, or using them as rags or for other household purposes.

## Zero Waste Household

**What are some sustainable cleaning products you can make at home?**

Using vinegar, baking soda, and other natural ingredients for cleaning, or buying eco-friendly cleaning products.

## Zero Waste Household

**What are some tips for composting at home?**

Choosing a composting method that works for your household, such as a backyard compost bin or worm bin.

## Zero Waste Household

**How can you reduce food waste in your household?**

Use meal planning, freezing leftovers, and composting food scraps.

## Zero Waste Household

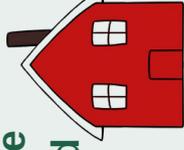

**How can you reduce your energy consumption at home?**

Turning off lights and unplugging electronics when not in use, using energy-efficient light bulbs and appliances, and adjusting your thermostat.

## Zero Waste Household

**How can you reduce your water usage in the bathroom?**

Taking shorter showers, fixing leaks, and installing low-flow toilets and faucets.

## Zero Waste Household

**How can you properly dispose of electronic waste in an eco-friendly way?**

Finding local recycling options for electronics or donating them to organisations that can repurpose them.

## Zero Waste Household

The 5R's approach stands for "Refuse, Reduce, Reuse, Recycle, and Replace."

False

Please, check the QR-Code.

## Zero Waste Household

Composting can help to reduce greenhouse gas emissions by diverting organic waste from landfills, where it would otherwise produce methane gas.

True.

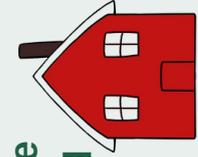

## Zero Waste Household

It is important to rinse food waste from dishes before putting them in the dishwasher to ensure that they are clean.

False

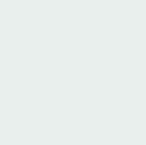

Please, check the QR-Code.

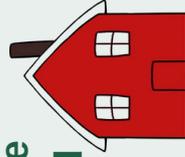

## Zero Waste Household

Using energy-efficient light bulbs is a great way to reduce energy usage and save money on electricity bills.

True.

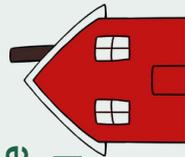

## Zero Waste Household

Composting is a great way to reduce waste and improve soil health.

True

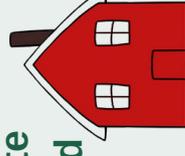

## Zero Waste Household

Running appliances like dishwashers and washing machines only when they are full is a great way to reduce water and energy usage in the household.

True.

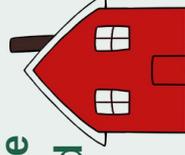

## Zero Waste Household

Using a reusable water bottle instead of disposable plastic bottles is a great way to reduce waste and save money in the long run:

True.

## Zero Waste Household

The 5R's approach to sustainable living emphasizes the importance of recycling as much as possible.

False

Please, check the QR-Code.

## Zero Waste Household

Explain the benefits of using a reusable water bottle instead of single-use plastic bottles with the teammates.

- Reusable water bottles can save money and reduce waste by eliminating the need for single-use plastic bottles.
- Using a reusable water bottle can help reduce plastic pollution in oceans and waterways, which harms wildlife and ecosystems.

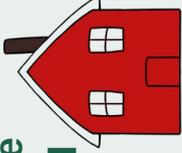

## Zero Waste Household

Discuss the environmental impact of single-use plastics and ways to reduce their usage in a household setting.

- Single-use plastics contribute to plastic pollution in our oceans and harm marine wildlife.
- Ways to reduce their usage include using reusable alternatives like cloth bags, metal straws, and glass containers.

## Zero Waste Household

Discuss the impact of food packaging on the environment and ways to reduce it, such as buying in bulk or bringing your own reusable containers.

- Food packaging contributes to landfill waste and greenhouse gas emissions from production and transportation.
- Buying in bulk or using your own containers can reduce packaging waste and save money in the long run.

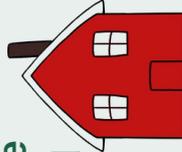

## Zero Waste Household

Discuss the impact of transportation on the environment and ways to reduce it, such as carpooling or using public transportation.

- Transportation is a major source of greenhouse gas emissions and air pollution.
- Carpooling or using public transportation can reduce traffic congestion, save money, and lower emissions.

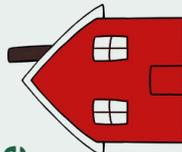

## Zero Waste Household

Discuss the following statement with the teammates: "Composting is a simple way to reduce household waste and produce nutrient-rich soil for your garden."

Composting involves the natural decomposition of organic waste material, such as food scraps and yard trimmings, which creates a nutrient-rich soil amendment.

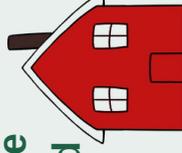

## Zero Waste Household

Debate the pros and cons of buying second-hand clothing as a way to reduce textile waste and promote sustainable fashion.

- Pros of buying second-hand clothing include reducing textile waste, and saving money.
- Cons of buying second-hand clothing may include limited sizing options, difficulty finding specific styles or brands.

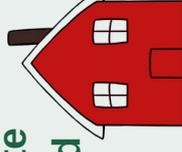

## Zero Waste Household

Debate the pros and cons of using cloth diapers versus disposable diapers for a baby.

- Cloth diapers are more eco-friendly and cost-effective in the long run, but require more effort and time to clean and maintain.
- Disposable diapers are more convenient and easier to use, but contribute to landfill waste and take hundreds of years to decompose.

## Zero Waste Household

Brainstorm ways to reduce water usage in a household, such as fixing leaks or using low-flow fixtures.

- Fixing leaks can save hundreds of gallons of water per year and reduce water bills.
- Installing low-flow toilets, showerheads, and faucets can reduce water usage without sacrificing comfort.

Start  
Card

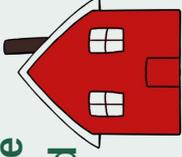

## Zero Waste Household

Using public transportation or carpooling instead of driving alone is a great way to reduce carbon emissions and air pollution.

True

## Zero Waste Household

Discuss the importance of biodiversity and ways to promote it in a household setting, such as planting native species or creating wildlife habitats.

- Biodiversity is essential for healthy ecosystems and provides important services like pollination and pest control.
- Planting native species can support local wildlife and promote biodiversity.

## Zero Waste Household

## Zero Waste Household

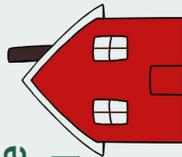

The 5R's approach to sustainable living emphasizes the importance of buying products with eco-friendly certifications, such as Energy Star or Fair Trade.

False

Please, check the QR-Code.

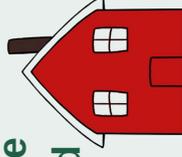

## Zero Waste Household

Debate the pros and cons of using solar panels versus traditional energy sources to power a household.

- Solar panels are a renewable energy source that can lower electricity bills and reduce carbon emissions, but require a significant upfront investment.
- Traditional energy sources like coal or natural gas contribute to air and water pollution.

Question

Question

Question

Question

Question

Question

Question

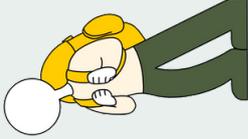

Question

## Eco Sports

**What are some examples of green sports activities?**

Examples: hiking, cycling, kayaking, and running.

## Eco Sports

**How can sports venues reduce their environmental impact?**

Sports venues can reduce their environmental impact by implementing energy-efficient lighting and heating systems, using renewable energy sources, and reducing waste through recycling and composting.

## Eco Sports

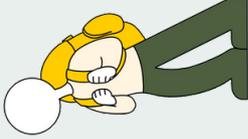

**How can athletes reduce their carbon footprint when traveling for competitions?**

Athletes can reduce their carbon footprint when traveling for competitions by using public transportation, carpooling, or flying on airlines that use sustainable aviation fuel.

## Eco Sports

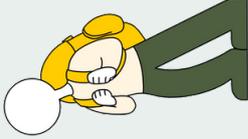

**How can sports organisations encourage fans to adopt sustainable practices?**

Sports organisations can encourage fans to adopt sustainable practices by providing recycling and composting bins, promoting public transportation and carpooling, and hosting sustainable events.

## Eco Sports

**What is a "Green Sports Activity"?**

A green sports activity is an activity that is environmentally sustainable and considers the impact on the environment.

## Eco Sports

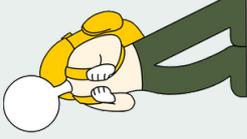

**How can sports equipment be made more sustainable?**

Sports equipment can be made more sustainable by using recycled or eco-friendly materials, and by designing products that are durable and can be easily repaired.

## Eco Sports

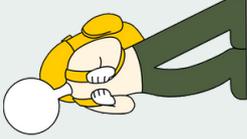

**What is a "green team" in the context of sports?**

A green team is a group of individuals who work together to promote sustainability and environmental responsibility within a sports organisation.

## Eco Sports

**What are some benefits of using renewable energy in sports?**

Benefits of using renewable energy in sports include lower operating costs, reduced carbon emissions, and a positive public image for the organisation.

## Eco Sports

Discuss the impact of sports equipment production on the environment and ways to reduce it.

- Impact: sports equipment production can lead to resource depletion, energy consumption, and waste generation.
- Ways to reduce impact: Using recycled materials, reducing packaging, and encouraging consumers to repair and reuse equipment can all help reduce the impact of sports equipment production.

## Eco Sports

Discuss the impact of sports tourism on the environment and ways to reduce it.

- Impact: Sports tourism can lead to carbon emissions from transportation, waste generation, and habitat destruction.
- Ways to reduce impact: Encouraging sustainable transportation options, promoting local conservation efforts, and reducing waste generation at events can all help reduce the impact of sports tourism.

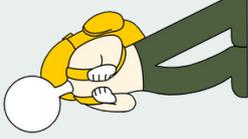

## Eco Sports

Discuss the impact of sports sponsorships on the environment and ways to reduce it.

Sports sponsorships can increase consumption, waste, and carbon emissions. To reduce impact, partner with eco-friendly companies, promote sustainable products, and encourage fans to make green choices.

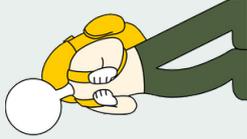

## Eco Sports

Discuss the impact of synthetic turf on the environment compared to natural grass and explore alternative solutions.

Synthetic turf harms the environment due to petroleum-based materials, poor biodegradability, and water drainage issues. Alternatives like natural grass or eco-friendly turf made from organic materials can be used. Also, smaller fields, rainwater harvesting, and recycled water for irrigation minimize the impact.

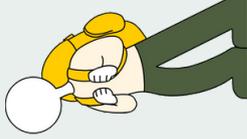

## Eco Sports

Debate the pros and cons of using renewable energy sources like solar or wind power for sports facilities.

- Pros: Renewable energy sources are environmentally friendly and reduce carbon emissions. They also provide long-term cost savings for sports facilities.
- Cons: The initial investment in renewable energy infrastructure can be high, and it may not be feasible for all sports facilities.

## Eco Sports

Debate the pros and cons of holding eco-friendly sports events.

- Pros: Eco-friendly sports events can reduce the carbon footprint of events, promote environmental awareness, and inspire positive change.
- Cons: Implementing eco-friendly measures may require additional time and resources, and some fans may not prioritise sustainability.

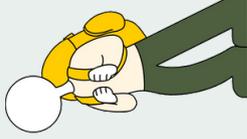

## Eco Sports

Debate the pros and cons of using electric vehicles for transportation to and from sports events.

- Pros: Electric vehicles are environmentally friendly and can reduce carbon emissions from transportation.
- Cons: The infrastructure for charging electric vehicles may not be widely available, and the cost of electric vehicles may be prohibitive for some fans.

## Eco Sports

Debate the pros and cons of using renewable energy sources like solar or wind power for sports events.

- Pros: Renewable energy sources are environmentally friendly and can reduce the carbon footprint of sports events.
- Cons: The initial investment in renewable energy infrastructure can be high, and it may not be feasible for all sports events.

## Eco Sports

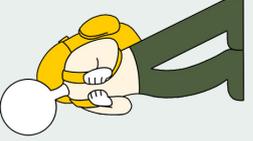

Using recycled rubber for sports field surfaces is not environmentally friendly.

**False**

Please, check the QR-Code

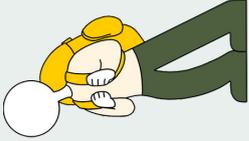

## Eco Sports

**Discuss the environmental impact of producing sports equipment and ways to make it more sustainable.**

Sports equipment production has negative environmental impacts due to resource use, energy consumption, and carbon emissions. To increase sustainability, use recycled or biodegradable materials, reduce packaging, and implement eco-friendly manufacturing. Promote the secondhand market and eco-conscious brands for a greener sports industry.

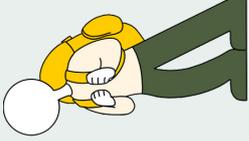

## Eco Sports

Renewable energy sources like solar and wind power can be used to power sports facilities and events.

**True**

## Eco Sports

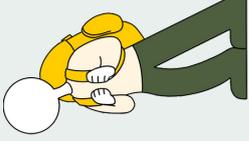

**Debate the pros and cons of using electric golf carts versus traditional gas-powered golf carts for golf courses.**

Electric golf carts are eco-friendly, emitting no emissions and being quieter. However, they may have higher upfront costs, require more charging stations and maintenance compared to gas-powered carts. Golf courses can explore walking or biking as alternative transportation options to reduce environmental impact.

Question

Question

Question

Question

Question

Question

Question

## Volunteering for the environment

### What is citizen science?

Citizen science refers to the involvement of the general public in scientific research and data collection. Volunteers participate in data gathering, observation, and analysis, providing valuable information to researchers and scientists. This collaborative approach helps expand scientific knowledge and understanding of the environment.

## Volunteering for the environment

### Where can you go to visit nature?

One can visit nature by exploring natural environments such as national parks, wildlife reserves, forests, mountains, beaches, or even local parks and gardens. These places offer opportunities to appreciate and connect with the natural world.

## Volunteering for the environment

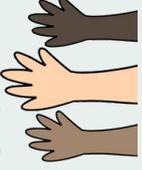

### What is the name of an environmental volunteering organisation?

One example of an environmental volunteering organisation is "Let's Do It World." This global movement focuses on organising cleanup events and addressing waste management issues worldwide.

## Volunteering for the environment

### What does a movement do?

A movement brings people together with a shared goal or cause. It aims to create awareness, drive change, and mobilize individuals and communities to take action collectively. Environmental movements, for example, work towards protecting and conserving the environment, addressing climate change, or promoting sustainable practices.

## Volunteering for the environment

### Can anyone become a volunteer?

Yes, anyone can become a volunteer for the environment. Volunteer opportunities are often open to individuals of all backgrounds, ages, and skill levels. There are various roles available, ranging from hands-on tasks to administrative duties, allowing people with different interests and abilities to contribute.

## Volunteering for the environment

### What kind of wage do you get in an internship?

Internships are typically unpaid positions. Instead of receiving a salary, interns gain valuable work experience, learn new skills, and make professional connections in their chosen field. Internships are often temporary and serve as a stepping stone for individuals entering the workforce.

## Volunteering for the environment

### How can volunteering in the environment help you?

Volunteering in the environment can have numerous personal benefits. It allows individuals to contribute to a cause they care about, develop a sense of purpose, and make a positive impact on the planet. Additionally, volunteering in nature can provide a sense of tranquility, reduce stress, and improve overall well-being.

## Volunteering for the environment

### How can you help your local neighbourhood environmentally?

You can help your local neighbourhood environmentally by participating in activities such as organising or joining cleanup events, promoting recycling and waste reduction practices, advocating for green spaces, supporting local sustainability initiatives, and educating others about environmental issues.

## Volunteering for the environment

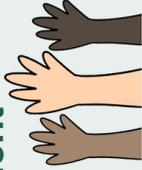

How can you make sure that you are helping wildlife correctly?

To ensure that you are helping wildlife correctly, it is essential to seek guidance from trained professionals, such as wildlife rehabilitators or environmental organisations specialising in wildlife conservation. They can provide proper instructions on how to handle specific situations, offer advice on wildlife rescue and rehabilitation, and ensure the well-being of the animals in need.

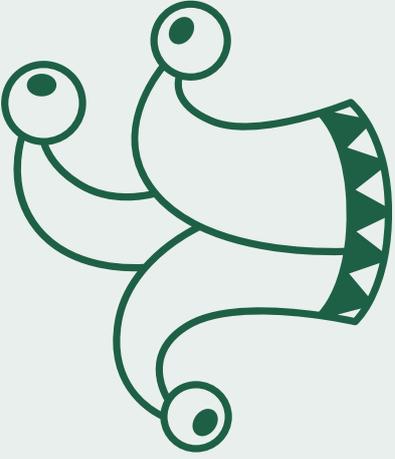

## Volunteering for the environment

What do trees provide us with?

Trees provide numerous benefits to both humans and the environment. They produce oxygen, filter air pollutants, provide shade and cooling, support biodiversity, prevent soil erosion, and contribute to the overall health and well-being of ecosystems.

## Volunteering for the environment

**Quick Internet Research:** Assign participants a specific environmental topic, such as "sustainable fashion" or "renewable energy innovations." In the given time, ask participants to conduct a brief internet search to find one interesting fact, statistic, or solution related to the assigned topic. Each participant can share their findings with the group, sparking a quick discussion on the importance and potential impact of the chosen topic.

## Volunteering for the environment

**Eco-Debate:** Choose a controversial environmental topic, such as "Should plastic bags be banned?" Divide participants into two groups and assign each group a different perspective (e.g., pro or con). In the given time, ask participants to prepare and present their arguments supporting their assigned position. After the presentations, allow for a brief debate where participants can exchange viewpoints and discuss the environmental, social, and economic impacts of the topic.

## Volunteering for the environment

**Action Planning Session:** Set aside time for participants to develop their own action plans for volunteering in environmental projects. Provide them with resources, such as a list of local environmental organizations or a guide to eco-friendly activities. Participants should use the given time to research and identify opportunities that align with their interests and skills. Each participant can then share their action plan with the group, fostering a sense of commitment and inspiring others to get involved.

## Volunteering for the environment

**Sustainable Solutions Brainstorm:** Divide participants into small groups and assign them different environmental challenges, such as reducing plastic waste or conserving energy. In their groups, participants should brainstorm and list as many sustainable solutions as possible within the given time. Afterward, each group can present their ideas to the whole group, fostering creativity and collaborative thinking.

## Volunteering for the environment

### Green Initiatives Speed Sharing:

Ask participants to think of one green initiative or action they have taken recently to contribute to environmental sustainability. In a quick round-robin format, allow each participant to share their initiative within a 1-minute time limit. This activity promotes idea sharing and inspires others to take small actions towards a greener lifestyle.

## Volunteering for the environment

**Eco-Challenge Brainstorm:** Present participants with a sustainability-related challenge, such as "How can we reduce plastic waste in our daily lives?" In the given time, ask participants to brainstorm as many ideas and solutions as possible. Encourage them to think creatively and come up with practical actions that can be implemented individually or collectively. After the time is up, allow each participant to share their ideas, fostering a brief discussion on the feasibility and effectiveness of different approaches.

## Volunteering for the environment

**Environmental Action Pledge:** In the given time, ask participants to think about one specific action they can commit to taking in support of the environment. It could be something small, such as reducing water usage or starting a composting system. Each participant can share their pledge with the group, fostering a sense of collective responsibility and inspiring others to take action.

## Volunteering for the environment

**Volunteer Experience Sharing:** Invite participants who have volunteered for environmental organizations or participated in eco-friendly initiatives to share their experiences. Each participant can briefly describe their involvement, the impact they made, and the lessons they learned. Allow time for questions and discussions, encouraging others to consider volunteering for environmental causes.

Question

Question

Question

Question

Question

Question

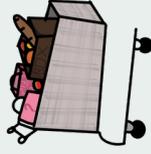

Question

Question

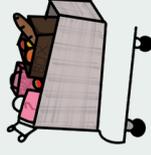

## Avoiding Overproduction & Overconsumption

**What is overconsumption?**

Overconsumption refers to the excessive or unsustainable consumption of goods and resources beyond what is necessary for a good quality of life. In other words, it means using too much of something or buying too many things that are very bad for the environment, like using too much water or making too much trash.

## Avoiding Overproduction & Overconsumption

**What are some examples of overconsumption in our daily lives?**

Uneaten food that is thrown away; purchasing trendy clothing items that are worn only a few times; using disposable plastic items like liquid bottles; frequent purchasing of toys, new electronic devices, shoes, and cosmetics.

## Avoiding Overproduction & Overconsumption

**How does natural resource consumption cause harm?**

The creation of nearly every product involves the extraction, processing, purchase, and sale of raw materials, often transported over long distances. Natural resources like metals, trees and fertile land are used to produce countless everyday products, from smartphones containing cobalt to soaps made with palm oil.

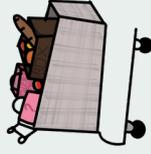

## Avoiding Overproduction & Overconsumption

**What examples of thinking ahead actions could be made?**

Examples: encouraging responsible consumption, policy and regulation implementation, promoting sustainable agriculture, implementing water conservation measures, adopting circular economy practices, investing in renewable energy, fostering biodiversity conservation, investing in sustainable transportation.

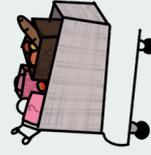

## Avoiding Overproduction & Overconsumption

**What is overproduction?**

Overproduction is the production of goods that exceeds the needs of the consumers who are consuming them. Factories and farms produce more goods than the consumers, people, can afford to buy.

## Avoiding Overproduction & Overconsumption

**What are key aspects of overconsumption?**

When people use or buy too much stuff, this leads to various problems associated with various negative environmental, social, and economic consequences.

## Avoiding Overproduction & Overconsumption

**What are the impacts of overconsumption and overproduction on the environment and natural resources?**

Volunteering in the environment can have numerous personal benefits. It allows individuals to contribute to a cause they care about, develop a sense of purpose, and make a positive impact on the planet. Additionally, volunteering in nature can provide a sense of tranquility, reduce stress, and improve

## Avoiding Overproduction & Overconsumption

**How does the production and disposal of items like plastic, shoes or fashion contribute to environmental problems?**

It contributes to environmental problems by depleting resources, generating significant waste, and emitting pollutants. These processes contribute to climate change, pollution, and ecological degradation.

Question

Question

Question

Question

Question

QR  
CODE

## Green Tourism

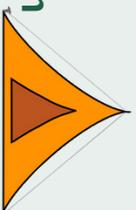

**How can green tourism be implemented?**

E.g. hiking in nature reserves, eco-friendly accommodation and transport, respectful interactions with local people and the environment, and supporting local sustainable development initiatives.

QR  
CODE

## Green Tourism

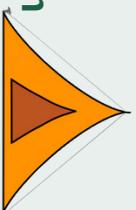

**What is meant by "sustainable tourism"?**

Sustainable tourism is a form of soft tourism. In addition to nature conservation, economic and socio-cultural factors are also important.

QR  
CODE

## Green Tourism

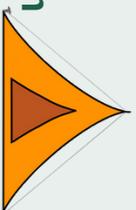

**What is soft tourism?**

It is a form of travel based on three fundamental principles: minimizing the impact on nature, experiencing nature as intensely and originally as possible, and adapting as best as possible to the cultural characteristics of the country you are visiting.

QR  
CODE

## Green Tourism

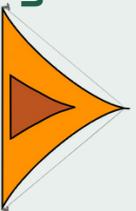

**What are the disadvantages of promoting soft tourism?**

Apart from the environmental problems that every long-distance trip inevitably brings with it alone through the CO2 emissions of the flight, gentle tourism also creates other problem areas, as some destinations are suddenly very trendy

QR  
CODE

## Green Tourism

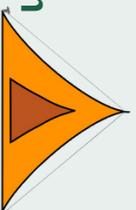

**What is meant by the term "green tourism" or "ecotourism"?**

"Green tourism" or "ecotourism" - a form of sustainable tourism - seeks to minimize negative environmental impacts from tourism while still achieving sustainable economic development for host communities, such as protecting natural resources, promoting biodiversity and promoting the cultural integrity of local communities and to share the economic and social benefits of tourism in a fair and equitable manner.

QR  
CODE

## Green Tourism

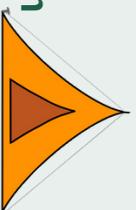

**What role does the International Ecotourism Society play in ecotourism?**

The International Ecotourism Society (TIES) is an American organization dedicated to promoting ecotourism worldwide. Established in 1990, the organization has been instrumental in the growth and development of ecotourism by providing policy, technical support, training, research and publications.

QR  
CODE

## Green Tourism

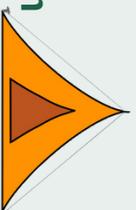

**What are the benefits of ecotourism?**

- Promotion of the preservation of unspoilt natural landscapes
- Reduced soil, water and air pollution
- Reduced greenhouse gas emissions
- Minimization of interventions in nature
- Strengthening of the local tourism industry
- Strengthening of the sense of responsibility

## Green Tourism

**What is the difference between soft tourism and mass tourism?**

The difference between soft tourism and mass tourism is that soft tourism focuses on sustainability and environmental and social impact, while mass tourism is an organized movement of large numbers of people to specialized locations.

Sustainable Destination Brainstorm:  
Challenge teammates to brainstorm ideas for making a destination more sustainable and environmentally friendly. Give them 5 minutes to write down as many ideas as possible, focusing on areas like waste management, energy efficiency, conservation initiatives, or community involvement. After the brainstorming session, ask participants to share their ideas with the group, encouraging discussion and collaboration.

## Green Tourism

A study showed that travelers are hardly willing to pay more for sustainable features of a tourist offer. How is it in your family? What would it mean if you as a family always traveled sustainably and paid more for it?

QR  
CODE

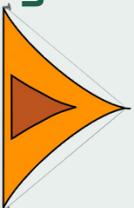

## Green Tourism

Try to explain to your teammates how climate change can affect tourism. Go into at least one of the following examples in more detail: change in weather, change in landscape, change in season, health risks, economic risks;

QR  
CODE

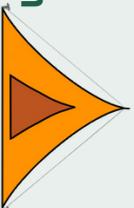

## Green Tourism

There are numerous studies examining the travel behavior of travelers. According to a survey by Lonely Planet, 70% of respondents have already traveled in an environmentally friendly way. Discuss with your teammates: How can private individuals travel in an environmentally friendly way? What problems do families have to solve when traveling in an environmentally friendly way (e.g. by train)?
